Real Time Embedded Systems: Design Principles and Engineering by Kvvk Prasad PDF. Deal with the constraints and trade-offs inherent in designing a real-time. any form of language can be viewed and manipulated as a real-time .Q: Best alternative to Async.Result I'm trying to convert a method to async so as to achieve thread-safe operations. I wrote a simplified version here: // TestMethod signature public async void TestMethod() { // First invocation does work var result = await LoadRemoteFile(); Assert.IsNotNull(result); // Second invocation is not awaited, so returns null var result2 = LoadRemoteFile(); Assert.IsNotNull(result2); } // LoadRemoteFile returns a Task private async Task LoadRemoteFile() { return await httpClient.GetRemoteFile(...); } The first invocation succeeds and the subsequent two should fail, as LoadRemoteFile was not awaited. It does fail, but it is still returning a Task for some reason. What would be the best solution to perform these assertions? I can think of either: Return an object that may have null and then do the Assert inside its methods. Return a Task, including the null task. Any thoughts? Edit: here is LoadRemoteFile public async Task LoadRemoteFile() { try { using (var client = CreateHttpClient()) {

Objective: With the long-term use of drugs for epilepsy, about one-fifth of patients are refractory. The add-on of levetiracetam as a third drug is an alternative. Aims: To evaluate the efficacy and safety of levetiracetam as an add-on therapy in patients with refractory epilepsy. Methods: Prospective open-label study in patients with refractory epilepsy. Patients received levetiracetam as an add-on therapy to sodium valproate and/or lamotrigine. Efficacy was assessed with the Pediatric Evaluation of Disability Inventory (PEDI), the Seizure Severity Scale (SSS) and a seizure frequency diary 3e33713323
