© 2009 HHD SoftwareQ: SQL Query counting rows without using functions? I would like to know if it is possible to use a count without using functions such as count(*) or group by. The problem is that I need to send the results to my program so I need the counts. The following statement counts rows by my individual id, however it doesn't use my individual id. I also need to count past records (ideally only those rows with my id). SELECT count(*) AS CntRows FROM app WHERE app_id = '10' AND (app_id in (SELECT * FROM app WHERE app_id = '10' AND app_id '10') OR app_id not in (SELECT * FROM app WHERE app_id '10')) I have tried this using AND app_id NOT IN but this only seems to count rows with my id that don't exist in the subquery, and simply counts all rows. So what I'd like to be able to do is something like this which counts rows and returns them: SELECT count(*) AS CntRows FROM app WHERE app_id = '10' AND (app_id in (SELECT * FROM app WHERE app_id = '10' AND app_id '10') OR app_id not in (SELECT * FROM app WHERE app_id '10')) If this
